

iTAM – IT ASSET MANAGEMENT

OPERATING-SYSTEM INDEPENDENT INVENTORY MANAGEMENT AND COMPANY-WIDE SOFTWARE RELEASE- AND LICENSE-MONITORING

According to 2016/2017 studies, software accounts for 20% to 35% of today's IT-Budgets. Audits on correct licensing occur with higher frequency than ever before. Due to this, the management is increasingly forced to proactively monitor and manage the correct levels of releases- and licenses.

Hence the increase of importance of an IT Asset Management (iTAM) in order to avoid costly penalties or cost inefficiencies for under- or over-licensed software. Microsoft- und Oracle-licensing bear a high risk-potential. Once IT Audits are called for, they tend to bind valuable resources and thus have a financial impact on available IT-budgets. Precise figures tend to be as difficult to obtain as it gets.

iTAM delivers a complete toolset allowing organisations to generate an always up-to-date organisations-wide and comprehensive IT-Asset-Management. On demand, the software rolled out and installed does not only end up registered and accounted for, but errors may be remedied on demand using the same toolkit. This way an efficient and effective management of licensing cost is possible for the IT department. Proprietary solutions often cover only a fraction of the desired license-management and fail confronted with a meticulous licensing audit. Roth&Partners (R&P) closes this gap by application of a combined field-proven technology stack and the precise **Managed Project Office (MPO) – Process**. Included in the service are:

- 1 initial Workshop
- 4 automated audits by R&P-Services
- 4 auditable intermediate reports as a base-documentation, to weather off costs and penalties of SW-audits

Taking into account potential penalties and auditing costs, iTAM amortises in less than **3 Months!**

WHY iTAM ?

iTAM – TECHNOLOGY AND METHODOLOGY

INVENTORY BASED ON AN OPEN MANAGEMENT ARCHITECTURE, TAILOR-MADE, SAFE AND SECURE

iTAM is based on an open management systems architecture: non-proprietary, highly secured Solution, customised to your requirements and needs. Your processes and solutions determine R&P's approach. Contrary to the usual vendor strategy, we adapt our processes to fit yours. We keep our approach and solution operating-system independent, whether it's Windows, Macs, Linux or your preferred flavour of Unix.

FIELD-PROVEN R&P MPO PROJECT PLAN

- | | |
|----------------------|--|
| 1.: | 2 days initial audit workshop on-site |
| 2.: First Analysis: | Operative run resulting in an auditable results document (1) |
| 3.: Second Analysis: | Operative run resulting in an auditable results document (2) |
| 4.: Third Analysis: | Operative run resulting in an auditable results document (3) |
| 5.: Fourth Analysis: | Operative run resulting in an auditable results document (4) |

Mean time to amortisation is 3 Months by correction of over-/underlicensed SW assets.
